- Sales Return refund against the Sales Return via different Payment mode
- Flexible with different type of Printers like Thermal, Dot Matrix and Laser
- POS Billing with Item Modifiers, OT Transfer option
- Member Identity validation/Verification via Smart Cards or OTP authentication

Payroll management

The employee payroll management facility allows the club to define the various types of personnel that work for the club and the salary/wage details of these personnel.

The feature is able to track employee attendance, overtime, staff advance and staff advance recoveries and also provides a facility to process the monthly salary details.

The attendance management is integrated with a biometric handprint reader for authentication of the employee.

Smart card management

The system is capable of issuing multiple types of smart cards to the members that can then be used to authenticate members/guests and authorize usage of club facilities. The cards can be used to either provide credit services or cash on card facility to the users.

Bulk Email

The club will be able to send emails with general information as well as Monthly invoice details to its members. The system will ensure the transmission of these emails to the members.

Bulk SMS

The club will be able to send SMS with general information as well as Monthly invoice details to its members. The system will ensure the transmission of these messages to the members.

Reports

Extensive reports are provided for every module that is available to the club. The club can also have reports specific to its own requirements.

Member access to club info

The club will also have the option of enabling member access to the club related information. Members will be able to login to the club website and access information about their recent bills, payments, golf scores, tournament scores, etc.

Payment gateway integration

CMS allows the club to provide a payment gateway service to its members to allow them to pay their bills online. This facility will make it more convenient for members to clear their bills with the club without having to go the club premises to do the same.

Fully integrated, single source club management system with an android app interface

why CMS?

Modern day clubs offer their customers a wide-ranging variety of facilities and benefits. The clubs need to be able to manage the usage of these facilities and also the transactions relating to the usage and membership of the club in a very efficient way. Normally clubs would be using a host of disparate applications to manage all their activities, for example room booking applications, facility usage applications and financial packages may be used by a club.

The problem with this approach is that the data pertaining to the same club and to the same group of customers will be spread across multiple software that do not talk to each other. So the data is duplicated in each of the software and also if data has to be moved for example from a billing application to tally software, the accounts department has to manually enter the data from the billing application reports to the Tally Software.

IRCA's Club Management System (CMS) is a solution to all these problems.

This software solution is designed to provide a club with everything that it need to manage all its activities through a single application. Furthermore the system can be extended to provide any new modules that may be specific to a club.

It is also robust enough to support multiple types of authentication like - smart cards, handprint readers, fingerprint readers, etc., and is designed to be secure and tamper proof with respect to the data.

CMS also integrates seamlessly with the new ERP version of Tally so that clubs that use Tally to manage their financial data do not need to assign personnel to transfer the transaction data from CMS to Tally. The CMS also provides a state of the art Restaurant management system based on touch screen displays. The application is web enabled thus allowing the club the flexibility of providing its members with access to the system on the internet. Payment gateway integration is another option that can enable club members to pay their bills to the club online.

▲ Dashboard

▲ Billing

▲ Monthly Statement

Our system provides up-to-the minute information on every sale within your facility, hence reducing the time of outstanding balances.

Dashboard

The Member Details page shows a list of members with the following columns: Member Name, Member Type, Account No., and Email Address.

Member Name	Member Type	Account No.	Email Address
PRAGHATI NAIK	ON	COA WIPRO1	pragnai@icmswipro.com
DEEPIKA	ON	COA WIPRO1	deepika@icmswipro.com
RAJESH KUMAR	ON	COA WIPRO1	rajeshk@icmswipro.com
AMIT SAURABH	ON	COA WIPRO1	amits@icmswipro.com
SATYAM	ON	COA WIPRO1	satya@icmswipro.com
DEVI ANSHU	ON	COA WIPRO1	devi@icmswipro.com
ANANYA GUPTA	ON	COA WIPRO1	ananya@icmswipro.com
RAJESH GHOSH - COR WIPRO	ON	COA WIPRO1	rajeshg@icmswipro.com

Member Details

Restaurant/bar management

The system provides a very user-friendly interface / user experience in carrying out quick billing, fully integrated with a inventory management system.

Room reservation

The Optional Room Reservation facility allows the club to define the types and number of rooms that are part of its offering and allow reservation of these rooms. Reservations, cancellations, check-ins, check-outs and room service can be tracked through this module.

Option to do bulk booking, bulk check-in, bulk checkout, flexibility to put additional charges in case of No show, Pre-Checkin, Pre check-out and Post check-out.

Complementary and Discount option to provide discount or Food / Full rent tariff for the privileged / VIP members.

Party Hall Booking

Members can book Party hall in advance, slots wise (breakfast slot, lunch slot, snacks slot etc.) Party booking can also be done. Party hall Bill settlement includes hall rent as well as food and beverages bill also. Party can be booked for different events like Club Paid, Club Free and Banquet for Members. Menu set can be configured for a booking.

Option to choose and decide Caterers, Music Planners, Decorators, Seating Style for a party. Generate Function Prospectus and trigger notification to various departments

Billing

All restaurant and facility usage billing can be managed through the billing system that is completely secure and can be integrated with the biometric authentication management system. The Billing module allows robust management of billing activities in user friendly manner and provides a strong audit trail of all billing related data changes.

Accounts management

All transactions that occur on the system can be exported to Tally ERP on the click of a button. No human intervention will be necessary. System is also capable of dynamically creating account heads for new members who have been enrolled into the system.

We understand your business and provide the necessary tools to allow your team to easily track and report all transactions within your facility...

By using the latest technology we have created a No. 1 product in the club industry

club setup

This feature lets the club define its organizational structure, employee data, bank details, member information, restaurant details, etc. The club can also request for the ability to define parameters specific to its own rules and regulations within this feature.

Inventory control

The Inventory of the club is tracked through this module which allows tracking of purchases, issues and stock transfers. The club can define multiple stores and items which will be tracked in these stores. The stores can be later linked to the restaurant/bar facilities to improve traceability of stocks.

Authentication management

The system can be accessed by the users (members/ employees) by the use of normal user-names and passwords. In addition the system allows the clubs the option of having other forms of authentication in the system to enhance security. These include:

- Smart Cards
 - Contact based smart cards
 - Contact-less smart cards
- Biometric Devices
 - Handprint readers
 - Fingerprint Readers

Membership management

The system can be used to create new members and also define the type of members. Gives a clarity on wait-list members. Fully-process driven by work flows.

Facility management

The various facilities available at the club, example badminton, billiards, tennis, gym etc. for use by its members can be defined here along with any usage charges and usage restrictions that may be applicable. The charges and restrictions maybe imposed based on the type of the member (member / affiliated club member / guest etc).
